

# Artwork Guidelines

## Corel® FILES & WHAT TO DO WITH THEM.

If you are using **Corel®** as your graphics program, there are a few steps that you need to follow to ensure your files open up on our systems.

We can not open Raw Corel Files (\*.cdr), So here are some steps for you to follow:

### CoreIDRAW®

- With your Corel Draw File open “*select all*” on your page.
- Go to the *EDIT* menu & *convert all to Curves/Outlines*.  
(This will ensure all fonts will stay as they are meant to be on our system).
- Then go to *File - Export as - Adobe Illustrator File (\*.ai)*.
  
- Your file should then be usable on all our systems here at Flexiprint.

### Corel® PHOTO-PAINT™

- Please *Export* these files as a \*.psd (Photoshop file) or a \*.pdf

If you continue to have any difficulties, please feel free to call our art department on (02) 6021 5900.

**NOTE:** it is up to the discretion of Flexi-Print P/L to decide whether the quality of the artwork is acceptable, and if any art charges will occur.
